DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 30-39, drawn to a delivery catheter for a gastric reduction system, classified in class 606, subclass 145.
- II. Claims 13-29, 40 and 42-45, drawn to an apparatus for gastric reduction, classified in class 606, subclass 151.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because gastric reduction apparatus need not employ a delivery catheter as a suture guide. The subcombination has separate utility such as a delivery catheter that can be used to guide and remotely manipulate a suture in other surgical applications.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

In the event that applicant elects to pursue prosecution of the claims of either Group I or II, the following election of species requirement applies:

This application contains claims directed to the following patentably distinct species of the claimed invention: in Group I, (1) a delivery catheter comprising a tube, needle and anchor, (2) a delivery catheter comprising a tube, needle, anchor and obturator; in Group II, (3) an apparatus for gastric reduction comprising a tube, needle, anchor and stabilization device, (4) an apparatus for gastric reduction with a stabilization device comprised of a coil screw, (5) an apparatus for gastric reduction with a stabilization device comprised of a shaft coupled to a plurality of resilient fingers disposed within a lumen, (6) an apparatus for gastric reduction with a stabilization device comprised of a plurality of resilient wires disposed within lumens spaced around the periphery of a tube, and (7) an apparatus for gastric reduction comprising a tube and an ejection needle.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 13, 30 and 40 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
